ABOUT ME

Current research

- My current research pursues to combine computational imaging, optimization, and machine learning to enable new intelligent imaging technology for various imaging applications including denoising, deblurring, super-resolution, image segmentation, optical microscopy, magnetic resonance imaging (MRI), radar, and autonomous driving, etc. My research efforts are taking place at two complementary levels: (a) the fundamental and mathematical aspects of imaging; (b) application-oriented projects in collaboration with researchers in medicine, biology, and computer vision.

Research interests

- Computational Imaging, Optimization, Deep Learning, Inverse Problems, Computer Vision

EDUCATION

Washington University in St. Louis (WUSTL), St. Louis, MO, USA 9/2017–6/2022 (*expected*)

- Ph.D student in Computer Science (GPA: 3.87/4.00), advised by Dr. Ulugbek Kamilov

University of Electronic Science and Technology of China (UESTC), Chengdu, China 9/2014–6/2017

- M.Eng in Communication & Information Engineering (Graduated with Honors)

University of Electronic Science and Technology of China (UESTC), Chengdu, China 9/2010–6/2014

- B.Eng in Communication Engineering (GPA: 3.89/4.00)

WORK EXPERIENCE

Facebook Reality Labs Research (FRLR) 5/2021–8/2021

Research intern with Dr. Brian Wheelwright Seattle (*remote*)

- Simulated the end-to-end peripheral display system (lens-lets and display LED array included) in Oculus and implemented a corresponding efficient ray-tracing model for the system, all from scratch.
- Solved the display calibration problem with the simulated display system and ray tracing model by designing various optimization strategies.
- Designed a novel deep-learning-based (neural representation) method for the challenging pupil-movement-based camera-to-display mapping in the virtual reality (VR) system, which achieved real-time rendering capability (0.3 sec) without losing visual quality.

Mitsubishi Electric Research Laboratories (MERL) 5/2019–8/2019

Research intern with Hassan Mansour Boston

- Investigated in 3D tomographic imaging problems challenged by noise corruption, data acquisition and problem model establishment.
- Established the whole system for data acquisition, and solved the problem by proposing two distinct methods, model-based optimization and data driven deep learning.

RESEARCH EXPERIENCE

Model-based deep learning for imaging and vision 8/2020 – *Present*

- Working on provable model-based unfolding networks for medical imaging application and computer vision tasks with various noise corruption (Gaussian, Poisson, etc) challenges.
- Developed imaging-model-assisted unsupervised, self-supervised and supervised learning methods for different imaging tasks such as denoising, deblurring, MRI, CT.

Learning-based optimization for imaging and vision 8/2020 – *Present*

- Conducted different image reconstruction tasks (e.g. deblurring, super-resolution, Poisson/Gaussian denoising, compressive sensing, phase retrieval, MRI, CT, etc.) by combining the physical models together with the deep learning priors, e.g. the model-based unrolling networks and learning-involved optimization.
- Extensively investigated in the variants of Plug-and-Play priors (PnP) and Regularized by denoising (RED) approaches for various imaging tasks (both theory and practice).
- Conducted the first mathematical analysis of plug-and-play priors (PnP) framework for minimum mean squared error (MMSE) denoisers. This result provides new insights into usage of deep-learning denoisers in PnP.
- Designed a practically efficient denoiser scaling technique that can greatly boost the performance of PnP algorithms under deep-learning priors by explicitly adjusting the amount of PnP regularization.
- Developed the stochastic variant of the PnP-ADMM algorithm for large-scale optimization and proved its convergence.

Compressed and stochastic algorithms for large-scale imaging

7/2018 – Present

- Developed the stochastic variant of iterative PnP and unfolding networks for large scale imaging application with convergence guarantee.
- Developed compressed proximal algorithms for stochastic optimization problems and was the first to prove the convergence.

Learning-based magnetic resonance imaging (MRI) and quantitative-MRI (qMRI)

7/2018 – Present

- Developed both supervised and self-supervised deep-learning-based methods for motion artifact removal in qMRI mapping.
- Investigated the application of reinforcement learning, neural representation and sparse representation in fast MRI reconstruction.
- Working on macroscopic-magnetic-field-inhomogeneities-corrected MRI image reconstruction

Some earlier research experience

3/2014 – 6/2017

- Development of whole intelligent home system.
- Designed routing and resource scheduling algorithms for large-scale network SDN.

INVITED TALKS

- SIAM Conference on Imaging Science, 07/2020
- UCLouvain, Image and Signal Processing Group Seminar, 09/2020
- Asilomar Conference on Signals, Systems, and Computers, 10/2021

REVIEWER EXPERIENCE

- **Conferences:** ISBI, ICASSP
- **Journals:** IEEE Transactions on Image Processing (TIP), IEEE Transactions on Computational Imaging (TCI), Optics Communications

TEACHING & SUPERVISION EXPERIENCE

(Head) TA for Optimization

1/2019–Present

Assistant Instructor

St. Louis

- Worked as an assistant instructor for course "Optimization" and "Large-Scale Optimization for Data Science" for four semesters. Developed and held weekly tutorial lectures and occasional guest lectures, hold office hours, answer questions online, design homework and exams.

Students supervision

7/2018–Present

Research Supervisor

St. Louis

Current students

- Eddie Chandler, "Inhomogeneity correction for MRI", *now B.S. student at WUSTL*
- Yixuan Luo, "Deep-learning-based image segmentation", *now M.S. student at WUSTL*
- Michael Kincheloe, "Reinforcement learning for MRI artifacts correction". *now B.S. student at WUSTL*

Previous students

- Zhixin Sun, "Neural representation for MRI reconstruction", *coming Ph.D student at WUSTL*
- Weijie Gan, "Fast MRI reconstruction and artifacts correction", *now Ph.D student at WUSTL*
- Jiarui Xing, "Deep-learning-based MRI artifacts correction", *now Ph.D student at University of Virginia*
- Shiqi Xu, "Sparse Fourier ptychographic microscopy", *now Ph.D student at Duke University*
- Hao Tang, "Adversarially robust classifiers for image reconstruction", *now M.S. student at WUSTL*
- Ryogo Suzuki, "Unfolding networks for image restoration", *now at Rakuten, Japan*
- Yukun Li, "Single image denoising", *now at Baidu Inc.*
- Fa Long, "Dictionary learning for image restoration", *now at Tencent Inc.*

SKILLS

- **Languages:** Python, Matlab, C, Java
- **Skills:** Optimization, Inverse problems, Tensorflow, Pytorch, Deep learning, Linux, TCP/IP

AWARDS & HONORS

Honors

- Honored Ph.D student in Computer Science & Engineering department (WUSTL) 2021

Scholarship

- Graduate Student First-Rank Academic Scholarship 2016

• Graduate Student Second-Rank Academic Scholarship	2015
• Graduate Student First-Rank Academic Scholarship	2014
• National Inspirational Scholarship	2013
• People's First-Rank Scholarship	2012
• National Inspirational Scholarship	2011
Others	
• Third-prize of 'Internet+' Entrepreneurship Competition in Sichuan Province	2016
• Great Award of Intelligent City Technology Competition	2016
• Award of Hackathon Programming Competition	2015
• Outstanding Graduate Student	2015
• Second Prize of Electronic Design Competition in UESTC	2011
